

I CLAIM

① A machine housing caster carriage conveying software engine article, comprising:

1. concretizing software integrating article traversing selecting from the group propagating microprocessor real-time computing;

whereby said machine conveyance propagating said article of software computing.

A process of transactional exchanging transmission conveyance, comprising:

2. solidifying software interlacing article conveying selecting from the group propagating microprocessor real-time computing;
3. providing software interlocking article of Claim 1 wherein said conveying selecting from the group propagating real-time accounting;
4. enabling software interjoining article of Claim 1 wherein said traversing selecting from the group propagating real-time reconciling;
5. 4. enjoining software intertwining article of Claim 1 wherein said conveying selecting from the group propagating real-time reporting;

whereby said processing conveyance propagating said transmission transacting.

A means of transitional exchanging transmission conveyance, comprising:

6. 1. enabling software interlocking article traversing selecting from the group propagating real-time financing;

2. enjoining software interlacing article of Claim 1 wherein said conveying selecting from the group propagating real-time accounting;

whereby said means conveyance propagating said transitional transmitting.

A means of transmuting exchanging transitions conveyance, comprising:

1. empowering software interlocking article traversing selecting from the group propagating microprocessor real-time computing;
2. enabling software intertwining article of Claim 1 wherein said traversing selecting from the group propagating real-time energizing;
3. facilitating software intercombining article of Claim 1 wherein said conveying selecting from the group propagating real-time fueling;

whereby said means conveyance propagating said transitional transmuting.

A means of transmission exchanging transactions conveyance, comprising:

1. enabling software interlinking article conveying selecting from the group propagating microprocessor real-time computing;
2. harnessing software interpaving article of Claim 1 wherein said traversing selecting from the group propagating real-time communicating;
3. leveraging software intercoiling article of Claim 1 wherein said conveying selecting from the group propagating real-time broadcasting;

whereby said means conveyance propagating said transactional transmitting.

⑥ A methodology of transactional exchanging transmission conveyance, comprising:

- 14 1. embroidering software intercoiling article traversing selecting from the group propagating microprocessor real-time computing;
- 15 2. enjoining software interlocking article of Claim 1 wherein said traversing selecting from the group propagating real-time transporting;
- 16 3. harnessing software interjoining article of Claim 1 wherein said conveying selecting from the group propagating real-time distributing;

whereby said methodology conveyance propagating said transmission transacting.

R A combination of transactional exchanging transmission conveyance, comprising:

- 17 1. chambering software conducting article conveying selecting from the group propagating microprocessor real-time computing;
- 18 2. harnessing software interlacing article of Claim 1 wherein said traversing selecting from the group propagating real-time accounting;
- 19 3. empowering software intertwining article of Claim 1 wherein said traversing selecting from the group propagating real-time reconciling;
- 20 4. chaining software interleaving article of Claim 1 wherein said conveying selecting from the group propagating real-time reporting;
- 21 5. leveraging software intergrating article of Claim 1 wherein said conveying selecting from the group propagating real-time communicating;

- whereby said combinatorial conveyance propagating said transactional transmitting.

whereby said combinatorial conveyance propagating said transactional transmitting.
